

## Installation

Unzip the help file and copy the HMS\_On-Line\_Help.chm to the same location as the 'Dynamics.exe' on the workstation. If the help file opens with a message that 'The Page Cannot Be Displayed', please see the security issue section that follows.

## Security Issues for Windows XP Service Pack 2 users.

When a file is downloaded from the internet, depending on your system security settings, Attachment Execution Services may consider it a potential security threat and will not allow the file to be opened until the file has been cleared as 'safe'.

To be able to use the On-line help file in Horizons, please perform the following steps:

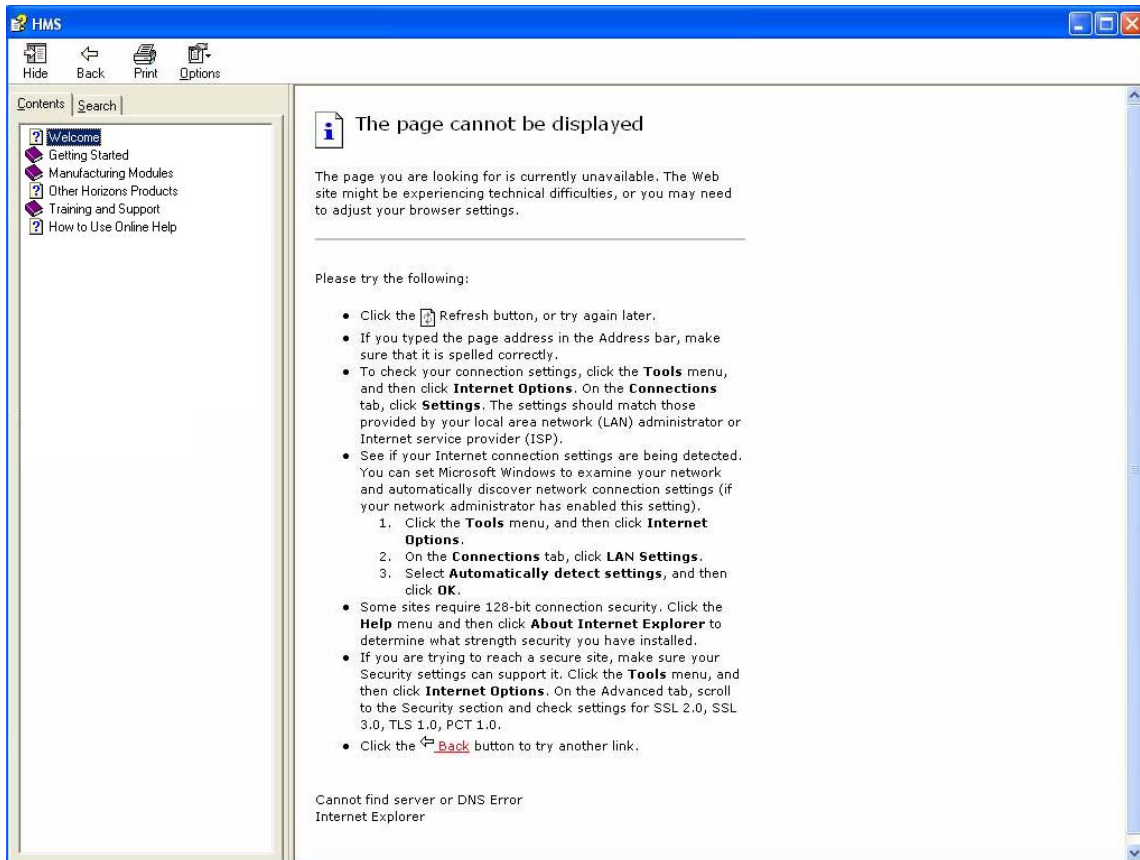

1. Open Windows Explorer and navigate to the 'root' of your Dynamics GP installation (this is the same location as the dynamics.exe)
2. Locate the HMS\_On-Line\_Help.chm file and double-click it to open it.
3. You will be presented with a 'Open File – Security Warning' dialog.

4. Un-mark the 'Always ask before opening this file' box.
5. Click Open.

You may now close the chm file and it will work within Horizons Manufacturing System.

If you have already opened the file and didn't un-marked the 'always ask' box, you will no longer see the above dialog, but the file will appear as below:

To resolve this issue, right-click on the chm file (using Windows Explorer) and select properties. There will be an 'Unblock' button. Once that button is clicked, the file will now open normally.

## Installing the Help File

Once you have unzipped the help file and verified that it can be opened by with the steps above, simply copy the .chm file to the root of the Dynamics GP directory (same location as the dynamics.exe). The help will now open automatically by using the help icon (?) or by clicking 'F1' on your keyboard.
